

PE1682/D

NHS Western Isles submission of 25 July 2019

thank you for your letter dated 11 July 2019.

Patients with Hidradenitis Suppurativa are treated as other dermatology patients. They are seen by the GP with the special interest in dermatology and treated by him.

Should a GP require Consultant input then the GP would refer the patient to a Consultant delivered clinic which is a clinic held via VC.

NHSWI does not in the cases of HS provide any additional services.
