

PE1804/II

Highlands and Islands Airport Ltd submission of 4 February 2021

The Civil Air Navigation Services Organisation (CANSO) published [Guidance Material for Remote and Digital Towers](#) on 8 December 2020. CANSO states that the aim of this guidance is to answer specific questions that air navigation service providers (ANSPs) may have, including: what is a digital tower and why and when can they be implemented.

CANSO have presented webinars on the guidance material. The final webinar is being held on Tuesday 16 February 1200-1330 and will cover seven different case studies and key learning points from them.

I understand that each case study will be presented by the relevant Air Navigation Service Provider, so member(s) of the Committee may find attending beneficial.
